Dear All,

Happy to do this but I need a little bit of time. We have terabytes of data, and I must sort through things before copying / destroying.

I'm confused why the NIH did not extend CSU's deadline, as they did for me, beyond June 27th. I also find their instructions for closeout confusing. I therefore had my lawyer email the NIH asking for clarification. I will forward you this request right after I send the present email.

Bryan

p.s. A complicating factor (?) is that the data are not housed on campus, but in my home on a standalone computer. I can't email you the files as they are too large, and emailing would probably violate the security agreement. What is your preference for how I get the copies to you?

Subject: RE: NIH dbGaP Data and Derivatives

Dr. Pesta,

As Dean Kahn indicates, CSU is still required to abide by NIH's directions per the letter dated May 27, 2021. I am copying Justin Grogan-Myers from IS&T, who will manage the secure storage of the ABCD data set or any other dbGaP data that you have accessed/stored. Please provide Justin with details of the directories and filenames for any dbGaP data or derivatives, and he will securely store them until your appeal to NIH is resolved. Those data must then be deleted from your computer.

Regards,

Ben

Subject: NIH dbGaP Data and Derivatives

Bryan,

I have shared your emails with CSU's VP of Research Office. They are still obligated to respond to NIH by June 27 and adhere to their given instructions. Hence, IS&T will need to store the dbGaP data and derivatives for the duration of your appeal to NIH.

CSU has asked that you indicate where the ABCD data set and any derivatives are currently stored so that IS&T can move them to a secure drive. You then are instructed to delete any and all dbGaP data from your device(s). When the appeal process is resolved, IS&T will either restore the data or permanently delete it as directed by NIH.

Senior Vice President of Research Forrest Faison and Director of Research Development Benjamin Ward are copied on this email.

Thank you for your cooperation.

Regards,
Ken
